

Portable Pulper Ragger Tail Cutter

Model 3040 NCT

**NFPA 1936
Compliant**

The Thomas Company and Holmatro, Inc have teamed up to rescue recyclers from the difficulty associated with disposal of a continuous pulper ragger tail.

Utilizing the hydraulic shears commonly used to rescue an accident victim from a wrecked vehicle has proven to be a safe, cost effective means to cut the tail into manageable lengths.

Find out how to cut ragger tails at a fraction of the cost of a stationary ragger cutter and without the danger associated with cutting with a steel power saw or a torch.

Ask your Thomas Co. representative for a demonstration of this equipment and a budget price.
